

# HOW DOES BARBACK WORK?

## STEP 1

Place BARBACK into the bottom of the Wash Sink and align with faucet. Let the water flow into the center hole of the dispenser and allow to fill the sink towards your desired concentration level of soap.

## STEP 2

After washing your dirty glasses with the soap suds, dip them into the middle Rinse Sink to remove excess soap.

## STEP 3

We recommend adding Cleanse Tec Sanitabs into the Sanitizer Sink. After the tablets dissolve, dip your glassware into the Sanitab solution for a completely clean & sanitized glass!

## SECRET BARBACK TIPS AND TRICKS OF THE TRADE...

Note the Concentration Levels on the side of the bottle...To make Extra Strength solution, let the water level in the sink come up to the top of the dispenser. For Mild solution, remove BARBACK when water level is only 1/3 up the side of the dispenser. Adjust to your ideal cleaning solution this way.

+ Try leaving some water inside the container after use. This solution will become a strong concentrated liquid detergent that can be used again by adding the new solution to water.

+ Use this solution to clean floors, counter tops, walls, garbage cans, pots & pans, utensils, glassware, and everything around your home or business.
